

Dynamics Symbol Font

Useful Information

Below is a list of locations and usage guidelines for symbols within the product. As a *general guideline, use a symbol according to it's label description*. In some cases a symbol may have a secondary name and that is available via the tooltip. Unicode values are for reference only, do not use directly.

The symbol font is used by setting the ImageLocation=Symbol and the NormalImage to a symbol name listed below.

Symbols are used in the following areas below.

1. **Navigation Bar/Navigation Pane:** No symbols. Symbols shown here are controlled by the client.
2. **ActionPane:** The ActionPane has symbols with text or text only.
3. **ActionPane fly-out:** The ActionPane fly-out has text only.
4. **Toolbars:** Toolbars have symbols with text or text only.
5. **Grids:** Grids have symbols for status indication (e.g. done, warning, etc...).
6. **Tiles:** Task tiles have symbols with text and count tiles have text only. "Blank" tiles (without counting numbers) can have symbols.
7. **Cards:** Cards can have toolbars with symbols (see guideline for Toolbars). They can have symbols for status indication and for type of card (e.g. expense types such as airfare, meal, hotel).
8. **Buttons:** Buttons can have symbols that match the action being taken. Buttons should either use symbols on the left of the text, text only, or image only.

If the symbol you would like to use has a label that is different from your required action, then use text only or [contact the icon team](#) to request a new symbol. The team will review the need and scenario for new symbols and will recommend a solution.

Horizontal alignment
