Dynamics AX Symbol Font

Version: Update2

Useful Information

This document contains a list of the available symbols within Dynamics AX, as well as information and guidelines around the usage of symbols in various locations in the product. *As a general rule, use a symbol according to it's primary label/description.* In some cases, a symbol may have one or more secondary names, and these are available in a smaller font underneath the primary name. Unicode values provided in the tooltip are for reference only -- Do not use the unicode values directly.

The symbol font is used by setting the ImageLocation property to "Symbol" and the NormalImage property to a symbol name listed below.

Guidelines for symbol use by location:

- **Navigation Bar:** The symbols shown in the Navigation Bar are controlled by the client.
- **Navigation Pane:** Workspace symbols shown in the Navigation Pane are defined by the corresponding workspace tiles.
- **Action Panes/Toobars:** Buttons on the Action Panes should be a combination of symbols and text for frequently used actions with an appropriate symbol. Otherwise, the buttons should be text only.
- **Action Pane fly-outs:** Symbols are not supported on buttons in Action Pane fly-outs.
- **Grids:** Grids can use symbols for status indication (e.g. done, warning, etc...).
- **Tiles:** Tiles that initiate actions (e.g. New button tiles) should always use a symbol, whereas other non-count tiles can optionally include symbols. Count tiles are text only.
- **Cards:** Cards may contain symbols in Toolbars (see the guideline for Toolbars), to indicate status, and to denote the type of card (e.g. expense types such as airfare, meal, hotel).
- **Buttons:** Buttons can have symbols that match the action being taken. Buttons should either use symbols to the left of the text, text only, or image only.

If the symbol you would like to use has a label that is different from your required action, then use text only or contact the icon team to request a new symbol. The team will review the need and scenario for new symbols and will recommend a solution.

Symbols

⬅☰	➡☰	▱
DecreaseIndent	IncreaseIndent	Layout
⬧	✈	▢
Map	AirFare (or Airplane)	Note
